PROFILE

DevOps and platform engineer with 7+ years across production infrastructure and software engineering. Experience includes Kubernetes migration, private-cloud infrastructure, Ansible automation, CI/CD, centralized logging, monitoring, load testing, and application modernization. Brings a software-development perspective to delivery, documentation, mentoring, and production operations.

CORE SKILLS

Platforms and automation: Kubernetes clusters, Helm, AWS, Linux, private cloud, Terraform, Ansible

Delivery and observability: GitLab CI/CD, Jenkins, GitOps, Prometheus, Grafana, ELK, OpenTelemetry

Data and traffic: MinIO, PostgreSQL, Nginx, HAProxy

Software engineering: Go, Python, Bash, JavaScript, React.js, REST APIs, FastAPI, Laravel

EXPERIENCE

NafisLife | DevOps Engineer

Tehran Province, Iran | Apr 2021 - Present

- Orchestrated a legacy-infrastructure migration to Kubernetes, reducing deployment downtime by 30%.
- Automated configuration with Ansible, reducing manual errors by 40% and improving provisioning efficiency by 20%.
- Built and maintained CI/CD, private-cloud infrastructure, and staging and production environments; reduced software release time by 30%.
- Improved visibility with Prometheus, Grafana, and centralized ELK logging; combined load testing and tuning to improve peak response times by 25%.

NafisLife | Software Engineering

Tehran, Iran | Oct 2020 - Apr 2022

- Architected reusable React component libraries and design systems across multiple projects.
- Guided legacy JavaScript modernization through planning, implementation, code review, and mentoring.

EARLIER EXPERIENCE

ArvanCloud | JavaScript Developer

Tehran, Iran | Feb 2021 - Apr 2021

- Built RESTful API integrations for CDN App, a platform for installing cloud applications on customer websites.
- Created technical documentation and user guidance for cloud-application integration and customization.

Shavaz | DevOps Engineer

Tehran, Iran | Apr 2019 - Apr 2021

- Supported a commerce platform with 600,000+ monthly active users; integrated GitLab CI/CD with Kubernetes, moving deployment cycles from weeks to hours and increasing team productivity by 30%.
- Deployed Prometheus and Grafana monitoring, improving system reliability by 40%, and worked with developers on high-traffic performance issues.
- Configured a four-node MinIO cluster for backups and media, reducing storage rental costs by 25%.

IAEO - Iran Agricultural Engineering Organization | Back-end Developer

Tehran, Iran | Jul 2020 - Oct 2020

- Led a migration from legacy PHP 5 to Laravel.
- Developed and maintained payment and financial features.

SELECTED PUBLIC PROJECT

End-to-end infrastructure lab: Built a four-VM infrastructure lab with a Kubernetes cluster comprising one control-plane node and two worker nodes, plus a dedicated builder, using Terraform/libvirt and Ansible. Added a private registry, GitLab Runner, kube-prometheus-stack, PostgreSQL HA, and a three-replica FastAPI deployment.

Prometheus exporter automation: Created reusable Ansible roles for node, Redis, and IPMI exporters to make monitoring deployment repeatable.

CREDENTIALS AND EDUCATION

Certifications: Certified Linux Network Professional (LPIC-2); Linux Virtualization & Containerization (LPIC-305); CompTIA Network+; Master of Bash Scripting; ReactJS

Education: Bachelor's degree, Computer Software Engineering - Boroujerdi University, 2014 - 2017

Languages: Persian (Native or Bilingual); English (Professional Working); German (Limited Working)

Publication: The application of wireless body sensor network along with Gamification in personal health monitoring
